

Degremont Technologies provides high-performance water, wastewater and sludge treatment solutions for any size population and virtually any influent condition. Industries also benefit from our diverse solutions.

Careful evaluation of each application means our customers receive the most efficient combination of technology and products. Our design engineers look at the entire treatment line to optimize your water supply.

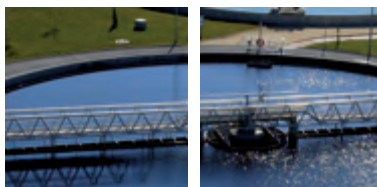

DRINKING WATER APPLICATIONS

Our proven water treatment technologies include high rate clarification, filtration, softening, dissolved air flotation, disinfection and biological treatments for iron, manganese and arsenic removal.

WASTEWATER APPLICATIONS

Our broad portfolio of wastewater products allows us to successfully manage a wide array of wastewater applications, such as CSO/SSO, reuse, clarification, filtration, as well as nitrogen and phosphorous removal. We also offer thermal oxidation, sludge stabilization and pathogen elimination applications specific to Biosolids.

INDUSTRIAL APPLICATIONS

Degremont Technologies designs and engineers industrial process water treatment systems. From flue gas desulphurization for the power industry to industrial separation applications, our team of specialists will work with you to design a solution that meets your industry's needs.
